Alfresco
Repository and
Share to start and
run inside the
application server

Core Alfresco
services,
workflows, rules,
and APIs to
execute

Communication
with databases,
message brokers,
search services,
and other
components

Secure, stable,
and efficient
operation of the
entire platform

Apache Tomcat – Application Server for Alfresco

Runs Alfresco Repository, Share and other web applications

Receives HTTP requests and processes them through the servlets and web components

Provides the runtime environment for workflows, rules, scripts, and Alfresco services

Connects to databases, message brokers, search engines, and other Alfresco services

Database – PostgreSQL, MySQL, or MariaDB

Information about users, groups, sites, folders, content properties, and relationships

Stores permissions, access control lists (ACLs), and role mapping

Stores workflow definitions, tasks, rules, and scripts used by the platform

Stores system config, audit logs, versioning, and scheduler info

Active MQ – Message Broker for Alfresco

Routes events and messages between Alfresco components using queues and topics

Enables background tasks such as transformations, workflow execution, and indexing

Temporarily stores messages and guarantees delivery even if a service is offline

Components do not need to be online at the same time, improving scalability and availability

LibreOffice – Document Transformation for Alfresco

Converts documents to PDF and other formats for preview and download

Creates high-quality previews displayed in the Alfresco user interface

Supports a wide range of file types including Office, OpenDocuments, and more.

Running as an external process ensures heavy conversions do not impact core repository performance

ImageMagick – Image Processing for Alfresco

Creates thumbnails of uploaded images for display in libraries, search results, and dashboards

Generates different image sizes for preview and download

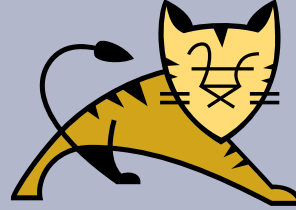

Converts images to other formats as needed for compatibility and display

Optimizes images for faster loading and reduced bandwidth usage

Tying it all together

LibreOffice
The Document Foundation

Student Assigned Servers

User Number	IP Address
User 1	54.88.22.218
User 2	34.234.93.161
User 3	54.90.121.225
User 4	54.89.159.78
User 5	54.234.216.112
